

AVISHKAR G

AI & Data Science · Full-Stack Developer (Learning)

✉ avishkarg2007@gmail.com

☎ +91 93458 18583

📍 Coimbatore, Tamil Nadu

EDUCATION

B.Tech — AI & Data Science

Karpagam College of Engineering,
Coimbatore
3rd Year | Expected 2026
CGPA: **7.7 / 10**

TECHNICAL SKILLS

Languages

- Python (Intermediate)
- C# (Learning)
- Java (Basic)

ML / Data

- Machine Learning
- Supervised Learning
- Unsupervised Learning

Web / Full-Stack

- Web Technologies
- React.js (Learning)

Tools

- Git & GitHub
- Jupyter Notebook
- VS Code

CERTIFICATIONS

NPTEL

- Soft Skills Development
- Intro to Internet of Things

Issued by IIT/IISc

INTERESTS

- Machine Learning
- Data Science
- Web Development
- AI Research
- Open Source

OBJECTIVE

Motivated B.Tech student in AI & Data Science with hands-on project experience in machine learning and web technologies. Seeking internship opportunities to apply technical skills and deliver real-world impact in data science, AI, or software development.

MACHINE LEARNING PROJECTS

Game Store Application *Full-Stack · Web Development*

- ▶ Built a full-featured game store application with browsing, search, and purchase functionality
- ▶ Designed user-friendly UI and robust backend logic for product and inventory management
- ▶ Implemented modular, reusable components using web technologies for a maintainable codebase

EV Charging Station Optimization *Supervised ML · Regression*

- ▶ Designed an ML pipeline to optimize EV charging station usage and predict demand patterns
- ▶ Applied regression modelling and feature engineering to achieve accurate demand forecasting
- ▶ Evaluated multiple models with cross-validation to improve charging efficiency and reduce wait times

Traffic Violation Analysis *Supervised ML · Classification*

- ▶ Built an ML pipeline to classify and analyse traffic violations from real-world datasets
- ▶ Applied data preprocessing, feature selection, and hyperparameter tuning to maximise accuracy
- ▶ Visualised violation trends and hotspot areas to support traffic management decisions

REACT MINI PROJECTS

Country Explorer *React · REST Countries API*

- ▶ Built an interactive web app to browse and search countries worldwide, displaying key details like population, region, capital, and flag
- ▶ Integrated the REST Countries public API with dynamic filtering by region and real-time search functionality

Online Fashion Store *React · E-Commerce UI*

- ▶ Developed a responsive e-commerce front-end featuring product listings, category filters, a shopping cart, and checkout flow
- ▶ Implemented React state management for cart operations and component-based UI for a modular, reusable codebase

Meal Finder *React · TheMealDB API*

- ▶ Created a recipe discovery app allowing users to search meals by name or ingredient, with detailed instructions and ingredient lists
- ▶ Consumed TheMealDB public API with async fetch calls; built a clean, responsive UI with React hooks

CURRENTLY LEARNING

Full-Stack Web Development with React.js — building end-to-end web applications focusing on component architecture, state management, and RESTful API integration.

ACTIVITIES & GOALS

- ▶ Actively building projects that bridge ML knowledge with practical software engineering
- ▶ Open to internships in data science, ML engineering, or full-stack web development
- ▶ Interested in collaborative AI/ML projects that combine predictive modelling with web interfaces
